

HVAC Concerns in Cobb Schools

HVAC Quality

Cobb Schools has invested significant amounts of money, time, and equipment in our HVAC infrastructure so students can learn without distractions. We do this to keep our buildings and classrooms as clean and healthy as possible.

Who does this work?

Cobb Schools HVAC standards and equipment are all industry standard and our Maintenance Division has a dedicated HVAC department that fully services and maintains indoor air quality throughout the district.

How do we ensure this?

Cobb Schools uses one of the most efficient filtration filters in the HVAC industry in all of our buildings. The District makes sure air quality is high, in all schools, and replaces over 27,000 air filters regularly.

We also use patented technology in many of our HVAC systems which scrub the air supply to introduce clean air into the conditioned space. This ionization device cleans the air and kills viruses.

We also use dehumidification in all of our schools.
