

# CCSD Wireless Directions: iOS 16

The following are directions for connecting your **PERSONAL** iOS device running version 12.2 or later (iPhone, iPad, iPod) to the CCSD Secured Wireless Network. You must complete **all three sections** and **follow all steps** for the Internet to work properly: Connect to Wireless, OnBoarding Verification, and Certificate Download.

## Connect to Wireless

1. Go to your WiFi settings and select the **CCSDWireless** network.

2. You will need to enter the **Password** provided by your local school's Library Media Specialist, Lab Manager, School Administrator, or TTIS. Press **Join**.

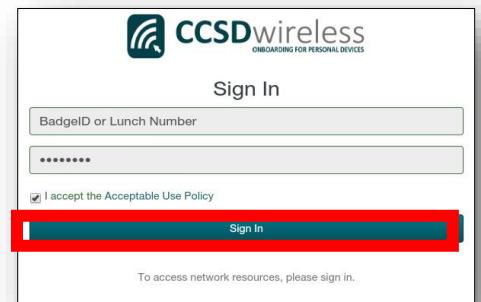

3. Open the **Safari** web browser and navigate to [login.cobbk12.org](http://login.cobbk12.org).

## OnBoarding Verification

4. Sign in to CCSDWireless using your **badge ID** (for staff) or **lunch number** (for students) and **Network Password**.

*Note: Network password is the same password used to access any school computer. Remember to check the Acceptable Use Policy after reading the terms.*

# Certificate Download

- 5. You will be redirected to the SSL Certificate Page. Click on the **gold key** to install the SSL Certificate.

*Note: If you do not get redirected to the SSL Page, open a web browser, and go to [cert.cobbk12.org](http://cert.cobbk12.org). Use Safari because other browser apps may not give the 'Profile Downloaded' prompt.*

- 6. When the popup window opens, select **Allow**.

- 7. Select **Close**.

- 8. Return to the Home screen and select **Settings**. You will now see the Profile Downloaded option at the top. Select **Profile Downloaded**.

*Note: If Profile Downloaded does not show, click General > VPN & Device Management.*

- 9. Select **Install** for the **CCSD FortiGate Root Authority Profile**.

*Note: This step requires the device to have a lock screen password. Enter the lock screen password to continue.*

- 10. Confirm by clicking **Install** a second time.

- 11. Click **Done**.

12. Update the Certificate Trust Settings. From your device's Home screen, select the **Settings** icon.

13. From the Settings menu, select **General**.

14. Select **About**.

15. Scroll down to **Certificate Trust Settings**.

16. Turn on the **CCSD FortiGate Root Authority**.

17. Select **Continue**.

18. Navigate to a secure HTTPS site like [www.yahoo.com](http://www.yahoo.com), [www.google.com](http://www.google.com) or [www.bing.com](http://www.bing.com). Verify that the page displays properly.
