Accessibility Tools in CTLS Assess

These directions will show the different accessibility tools found within CTLS Assess and how they can be used by students while taking assessments. Each tool would need to be enabled by the teacher to make these available on the student dashboard during an assessment.

Read Aloud

1. If enabled, students will see the read aloud speaker icon on their assessment toolbar at the top right and may click to turn it on.

2. Any typed text for passages, questions and answers will be read aloud, but it will not read images with text or PDFs.

Line Reader

1. If enabled, the line reader icon will appear on the assessment toolbar and students can click to activate it.

2. The line reader can help students focus on a single line, or multiple lines of text.

3. The line reader window can be expanded by grabbing the triangle handle in the lower right-hand corner and dragging it larger.

Color Contrast

1. If enabled by the teacher, students can click on the **sunburst icon** on the top right toolbar.

2. Color contrast allows the user to change from the usual white background with black text. Options include reverse contrast, black on pink, yellow on blue and more.

Audio Recording Response

1. Teachers can enable an audio recording feature for constructed response or teacher-paced items. This allows students to speak their answer and have it recorded.

2. If students choose to use the audio recording feature, the **microphone** in the toolbar at the top right can be clicked to enable this feature.

3. Once finished recording, students will click **Save**.
