

# Create a Website Shortcut on the Desktop

---

These directions explain how to create a website desktop shortcut from a web browser.

1. Open a **web browser**.
2. Enter or search the website you want to make a shortcut.  
*Note: This works the same in Microsoft Edge and Google Chrome.*

3. Reduce your browser window so that it's not full screen, but still visible.
4. Highlight the **URL/web address**.
5. Holding down the left-click, drag the website address onto the **desktop** and **release**.
6. The webpage is now available on the desktop.

7. Right-click on the icon to **Rename** the webpage shortcut.
